Teach the language, then debate

Session 2: dependent prepositions; viewpoint versus tone; claims with convincing support. 75 minutes.

Print and organise

先準備詞庫、講義及閱讀卡。

Per student: three-page student handout. Keep the four-page language bank for review, or share one reference copy between two students.
Classroom games: project the HTML phrase game and the two pick-a-side games, or let pairs play on a device. Students can move to yes / no / depends areas, point or vote from their seats. No reading cut-outs are needed.
Source: responses transcribed from the user-supplied Unit 9B p.109 photograph. The six full responses appear in the HTML reading games with source credit.

75-minute sequence

詞庫先作支援，最後用於個人論證與回應。

Time	Teaching and material
0-4	Same position, different tone: compare the two original opening comments.
4-9	Language bank p.1 + handout p.1: notice word + preposition + noun / pronoun / -ing. Twelve starred chunks are the active set.
9-17	Complete eight gaps and repair two sentences. In pairs, say a personalised example with a recycled unit word.
17-23	HTML phrase game: meaning, missing preposition and use in a sentence. Play a few core items in class; the full 60 remain available for review. Choose three chunks for the debate.
23-28	Handout p.1: separate position, reason, example and tone. Model a tone judgement with exact wording.
28-39	HTML viewpoint game: read each response, choose yes / no / depends, then explain a reason before revealing the feedback.
39-47	HTML tone game: identify attitude and a cue in the same texts. Compare A/F (both no) and B/D (both yes). Do not score position as tone.
47-55	Handout p.2: model claim, reason, concrete example, link and response. Show why a personal example is limited support.
55-62	Each student prepares an argument. Pair checks the example-to-claim link and three preposition chunks.
62-71	Handout p.3: two debate rounds and feedback. Every student makes an opening and a response.
71-75	Individual exit: revised claim + support, most convincing evidence heard, and a corrected / newly learned chunk.

Scope: 60 chunks are a reference resource; do not try to teach all as new items in 75 minutes. Recycle Units 1 (feelings / qualities), 2 (education, places, communication), 5 (people / teamwork) and 9 (jobs / work priorities) in examples and arguments.

Viewpoint is different from tone

Use the answer key as a reasoned interpretation, not a fixed one-tag matching exercise.

Reading key

接受其他有詞句支持的語氣判斷。

Text	Position + support	Tone + possible cue
A Lydia	No: she had not learned programming or project management before her first job.	Critical and fairly measured: contrasts interesting facts with not using them in her job.
B Sophia	Yes: history helped her learn how to think.	Warm / affirming and emphatic: grandmother story; “My grandmother was right!”
C Daniela	Depends on the job: school is a foundation; further specialist learning is needed.	Measured / qualified: “It depends”; “a great start, but …”.
D Paul	Yes: school football helped develop teamwork.	Confident / emphatic: “definitely”; positive emphasis on teamwork.
E Danh	Depends: subjects may not directly match a job, but can reveal interests and careers.	Measured / qualified: “in some cases”, “However”, “probably”.
F Aslan	No: he questions the relevance of school learning to practical job tasks.	Dismissive / abrupt or frustrated: short rhetorical answers, “Never!”, “Sadly”.

Separate the axes: A and F share a negative position but sound different. B and D share an affirmative position but use different voices. “Factual” in the book describes a matter-of-fact style; it does not establish that a claim is true. Critical tone can be measured and useful. A phrase can signal both position and tone.

Game routine: everyone chooses before the answer is revealed. Ask for a reason, then check the feedback. In the tone game, the options offer one supported interpretation; accept other labels when students explain exact wording.

Preposition key and useful distinctions

整個詞組一起核對。

Eight gaps: for / with / from / on / to / on / for / from.
Repairs: I agree with my classmate. I am interested in learning about jobs.
Contrast: agree with a person / agree on a plan / agree to a proposal. After a preposition use a noun, pronoun or -ing form. Accept other grammatically valid patterns when their meaning fits.

Help students convince a listener

A precise claim needs relevant support and a clear explanation of the connection.

Model a supported challenge

用閱讀例子提出有範圍的反方論證。

Claim: School alone does not prepare students adequately for some job-specific tasks.
Reason: Technical work often requires practical preparation.
Reading example: Lydia says she had not learned programming or project management before her first job.
Link: Her example illustrates a gap between what she studied and what that job required.
Qualification: One person's experience does not show that every subject or school fails.
Response: I agree with you that thinking skills matter. However, schools could also provide opportunities for practical projects.

Make the debate work

明確分工，確保每人都開場及回應一次。

Use groups of four with two contrasting claims. Allow a qualified yes, no or depends; ask the pairs to identify their actual disagreement. Agree what “school” means. Examples from secondary school and university should be clearly labelled.
Round 1: A1 opens, B1 opens, A2 responds, B2 responds, 45 seconds each (3 minutes). One-minute planning break. Round 2: swap opening / response roles (3 minutes). Finish with two minutes of evidence-based feedback. Total: 9 minutes.

Check persuasion, not just fluency

回饋要指出有用的具體改動。

Check	What to listen for
Claim	A clear answer with a sensible scope; no unsupported always / never claim.
Support	A named reading idea and a concrete experience or clearly labelled imagined case.
Connection	The speaker explains why that example supports the claim.
Response	The speaker answers the strongest objection instead of repeating the opening.
Language and tone	At least three appropriate preposition chunks; wording helps the audience follow and consider the argument.

Evidence boundary: the six reading responses are selected personal views. Do not present them as representative survey findings or count them as proof that school does or does not work. A specific personal experience can illustrate a point; a wider claim needs wider support.
